Limits to Cell Growth. •The larger a cell becomes, the more demands the cell places on its DNA. In addition, the cell has more trouble moving enough nutrients and wastes across the cell membrane. -The rate at which food, oxygen, water, and wastes are moved in and out of the cell is dependent on the surface area of the cell. A cell's ratio of surface area to volume decreases as it grows larger. This means that the area available for diffusion also decreases. Thus, if a cell grows too large, it is unable to take in all needed materials and expel all its wastes. These problems impose limits on the growth of the cell. Ch. 10 Assessment: Cell Growth & Division

Answers

Flashcards | Quizlet • A cell's volume increases at a faster rate than its surface area. As a cell grows, its surface-area-to-volume ratio becomes too small. • The larger a cell gets, the harder it is for enough materials to move across its cell membrane. Cell division solves the information overload and materials exchange problems.

978-0-13366-951-0, Publisher: Prentice Hall Biology 2010 Student Edition Chapter 10, Cell Growth and ... The cell cycle must be carefully regulated because each cell in a multicellular organism must grow and divide to a certain point and then stop. Then cell-programmed death or apoptosis must occur because, after a while, a cell is too damaged to continue and must die. Biology 2010 Student Edition Chapter 10, Cell Growth and ... Biology - Chp 10 - Cell Growth And Reproduction - PowerPoint In Chapter 10, students will be able to express their knowledge of the cell cycle orally, in written words, and by modeling it with classroom objects. Students will apply their knowledge of cell regulation and differentiation by creating real-world analogies for both processes.

CHAPTER 10 Connect to the Big Idea Cell Growth and Division Cells divide because of the problems of DNA“overload” and of increasing size that decreases the ratio of surface area to volume.
