Abstract: This presentation will provide an overview on antenna calibration, what it means to calibrate an antenna and why you should care.

Introduction to Antenna Calibration Methods: An overview ... Commonly used standards for the calibration of EMI antennas are ANSI C63.5 [2], SAE ARP 958 and CISPR 16-1-6 [5]. The following discussion will focus on the requirements called out in ANSI C63.5-2006. An EMI test laboratory must define the calibration requirements for all test equipment, including the requirements for antenna calibration.

Antenna Parameters and Antenna Calibration - In Compliance ... Antenna Calibration. Our

Antenna Calibration process follows the requirements of ANSI C63.5, resulting in data collection with a resolution of less than 500 kHz. While this procedure may produce many data points, we will reduce the antenna factor data to a manageable value while maintaining an accuracy of 0.1 dB with respect to the full breath ... Antenna Calibration - Intertek The EMC antenna, with the emphasis placed on wide bandwidth, is a unique blend of parameters that allows EMC testing to be conducted with minimal time-consuming changes to the setup. EMC Antenna Parameters. The main parameters of an EMC antenna are the antenna factors. There are two antenna factors of interest: the receive antenna factor (AF ... How to Figure EMC

The standard test site for EMC compliance measurements is the 10 m open area test site, according to CISPR publication 16 1. There is a trend to move radiated RF measurement facilities to indoor shielded rooms for two key reasons: to eliminate ambient RF interference and to ... A New Facility for Antenna Calibration Golden Antennas. by Daniel D. Hoolihan, Hoolihan EMC Consulting and NIST/NVLAP Lab Assessor. Reference standards are called out in ISO/IEC 17025: General Requirements for the Competence of Testing and Calibration Laboratories.

The term reference standards appears in Clause 5.6, titled Measurement Traceability, specifically, Clause 5.6.3.1.. The laboratory is required to have a program and ... LearnEMC - Introduction to EMC I can design and build an antenna but the problem is then to calibrate it to a reasonable degree of accuracy for pre-compliance

testing. One procedure is to use a calibrated antenna as a signal source to test and calibrate the antenna under test (AUT). But that requires one of those golden calibrated antennas. Our A2LA-accredited Calibration Laboratory (Lab Cert #1207.01) is equipped with calibrated instrumentation traceable to National Metrology Institutes (NMI), several anechoic chambers, test cells, and an 80 m x 50 m welded steel ground plane for antenna calibration. ETS-Lindgren Public Website Calibration Services Video EMC antennas are used for two types of measurements: radiated emissions (RE) and radiated immunity (RI). In the first case, formal calibration of the antenna and the use of traceable standards are required. In the second case, calibration is not required as the calibrations are usually performed as part of a complete EMC test
