of the collected data is a much more math-y and challenging task. Mathematical Medicine: Computed Tomography (CT Scans) | by ... X-ray Computed Tomography (CT) $f(x)$ = density of the cross-section at $x \in \mathbb{R}^2$ (slide 1). L = the line of X-rays, $I(x)$ = the intensity of X-rays at $x \in L$. Physics: $I(x)$ is decreased proportional to $f(x)$: $dI/dx = -f(x)I(x)$ $dI/I = -f(x)dx$. Measured data: $I_{in} I_{out} = e^{-Rf(L)}$ An Introduction to the Mathematics of Tomography - p. An Introduction to the Mathematics of Tomography Tomography is a widely used method to reconstruct cross-sections of the interior structure of an object without having to cut or damage the object. In this context one usually speaks of computerized (computed, computer assisted)

Library Natterer, F., The Mathematics of Computerized Tomography ... The basic mathematics behind tomography was worked out by the mathematician Johann Radon in 1917. Much later, in the 1960s Allan McLeod Cormack, working in collaboration with Godfrey Newbold Hounsfield, developed the first practical scanning device, the celebrated EMI scanner. For this work, Cormack won the Noble Prize. THE MATHEMATICS OF COMPUTERIZED TOMOGRAPHY - Shepp - 1987 ... A device used in tomography is called a tomograph, while the image produced is a tomogram . In many cases, the production of these images is based on the mathematical procedure tomographic reconstruction, such as X-ray computed tomography technically being produced from multiple projectional radiographs.
