Yaskawa The Yaskawa P1000 series  
drive is designed for variable torque  
applications. During a fault  
condition, the digital operator will  
display codes to alert the user to  
these conditions. The following is a  
listing of possible codes along with  
some potential reasons for the code  
and some solutions that may  
quickly clear the code allowing the  
drive operation to  
continue. Yaskawa P1000 Alarms &  
Faults alarm occurred. Check the

power consumed by DB resistance (Un00B) to see how many times the DB has been used. Or, check the alarm history display Fn000 to see if the DB overload alarm A.730 or A.731 was reported. Change the SERVOPACK model, operating conditions, or the mechanism so that the DB does not need to be used so frequently.
